Hi! I'm Love, a game programming student at PlaygroundSquad. Throughout my education I have developed a wide set of skills and experiences regarding game programming.

During the game projects I have worked in teams across disciplines in several different engines and languages, including Tension's proprietary engine TenGine.

I am comfortable with Git source control, and have developed games with the PS5 SDK.

Game Projects:

Project: Echo - TenGine

Primarily worked on the interaction mechanics using the PS5 gyro controls, and controller feedback.

TECHNOMANIA - Unreal Engine 5

Worked on enemy AI using UE5's behavior trees. Also made systems to control the arena style combat.

M0THER - Godot

** Nominated for SGA 2026 - Best Technology **

Primarily worked on systems and functions of the various traps, and making them easy to configure in the editor.

Ex Umbris - Unreal Engine 5

** Nominated for SGA 2026 - Best Visuals **

Worked on NPC behavior to follow a schedule and react to player actions, using UE5's behavior trees. I also made the time loop system to control the schedule and other things in the world.
